

Retail Sales Data Analysis Report

1. Introduction

This project focuses on analyzing retail sales data to identify trends, patterns, and key factors affecting business performance.

2. Dataset Description

The project uses three datasets: Sales dataset, Features dataset, and Stores dataset. These datasets were merged for analysis.

3. Data Cleaning & Preparation

Date columns were converted to datetime format and datasets were merged into a single dataset.

4. Exploratory Data Analysis

Sales trends, store type performance, holiday impact, and external factors were analyzed.

5. Key Insights

Sales show seasonal trends. Store Type A performs best. Holidays increase sales.

6. Business Recommendations

Increase inventory during peak seasons, focus on high-performing stores, and plan promotions during holidays.

7. Conclusion

The analysis helps in making data-driven business decisions.
